PROFESSIONAL SUMMARY

Artificial Intelligence and Data Science undergraduate with hands-on experience in designing and deploying intelligent systems, including multi-agent architectures, Retrieval-Augmented Generation (RAG) pipelines, and Large Language Model (LLM) fine-tuning. Proven ability to build scalable, production-ready applications that integrate machine learning, real-time data workflows, and backend systems. Proficient in Python and modern AI/ML frameworks, with a strong focus on system design, automation, and developing practical AI solutions for real-world challenges.

EDUCATION

Bachelor of Technology — Artificial Intelligence & Data Science	2023 – 2027
<i>Karunya Institute of Technology and Sciences, Coimbatore</i>	
Higher Secondary Education (Class XII)	2020 – 2022
<i>Kurinji CBSE School</i>	

TECHNICAL SKILLS

Programming Languages:	Python, Java, JavaScript, SQL, C,
Generative AI:	LLMs, RAG Architecture, Prompt Engineering, Embeddings, Vector Databases, DeepEval, Guardrails.
AI / ML & LLM Frameworks :	PyTorch, TensorFlow, Hugging Face Transformers, OLLAMA, Langchain, LangGraph, AutoGen.
Computer Vision:	OpenCV, CNN-based Image Classification, SAM, YOLO.
Data & Analytics:	Pandas, NumPy, Matplotlib, Data Cleaning, Feature Engineering
DevOps & Cloud:	Git & GitHub, Docker, Kubernetes, GitHub Actions (CI/CD), AWS / Azure.
APIs & Integrations:	REST APIs, GraphQL, GitHub API, Google Custom Search API, MCP

WORK EXPERIENCE

Software Engineer Intern – Graceful Management System (GMS)	Jan 2025 – Present(1 year, 4 months)
- Developed AI-driven models to estimate construction costs using structured datasets - Built and optimized backend systems for scalable application performance - Improved UI/UX for efficient workflow management - Integrated AI models with frontend and backend systems for real-time predictions	
Programmer – Karunya Project Team	Aug 2024 – Mar 2025(8 months)
- Developed full-stack web applications. - Designed responsive UI and integrated frontend with backend services - Managed databases and optimized data handling - Collaborated with teams using Git; contributed to projects like Monthly Report, Jesus Calls, and Smart Karunya	
Web Development Intern – Miya Mediaz	May 2024 - June 2024(1 month)
- Developed and maintained web applications using HTML, CSS, JavaScript, Python, and MySQL - Designed responsive interfaces and integrated frontend with backend services - Managed databases and supported API-driven features - Collaborated with developers using Git and participated in code review	

PROJECTS

DrugTrace – Multi-Agent AI Drug Repurposing Platform

[View Project](#)

Tech Stack: FastAPI, LangGraph, LLMs, NVIDIA NeMo (AIQ), BioNeMo, Neo4j, MongoDB, React, REST APIs

- Designed a multi-agent AI system that combines LLM reasoning with structured biomedical data to identify potential drug repurposing opportunities
- Built agent workflows using LangGraph for coordinated validation, analysis, and decision-making across multiple stages
- Integrated Neo4j for graph-based knowledge representation and MongoDB for scalable storage of biomedical datasets and results

AegisDrive – Secure V2X Communication System

[View Project](#)

Tech Stack: Python, Machine Learning(Random Forest), Blockchain, Cryptography, FastAPI, MongoDB, Networking, React, REST APIs

- Developed a secure V2X communication system with ML-based intrusion detection to identify anomalous and malicious network behavior
- Implemented blockchain mechanisms to ensure data integrity, trust, and tamper-proof communication across nodes
- Designed networking workflows and integrated MongoDB for efficient storage, monitoring, and real-time analysis of communication data

Hierarchical Multi-Agent Application

[View Project](#)

Tech Stack: Python, LangGraph, LangChain, LLMs, Redis, MongoDB, Nginx, REST APIs

- Designed a hierarchical multi-agent system with **dynamic role generation**, where a primary agent creates and assigns roles (e.g., CEO, Manager, Worker) based on task requirements
- Built agent orchestration workflows enabling agents to spawn sub-agents, delegate tasks, and coordinate complex multi-step execution dynamically
- Implemented **role-based access control (RBAC)** to enforce permissions and secure task execution across different agent roles
- Integrated Redis for task queuing and state management, MongoDB for persistent storage, and Nginx for scalable routing and performance

Multi-Agent Onboarding System

[View Project](#)

Tech Stack: LangGraph, LLMs, FastAPI, Slack API, MongoDB, REST APIs

- Designed an AI-driven onboarding platform using multi-agent architecture to automate user workflows and task coordination
- Built conversational agents that handle multi-step interactions, dynamically assigning tasks and guiding users through onboarding processes
- Integrated Slack API for real-time communication and notifications, and MongoDB for scalable storage of user data and workflow states

CERTIFICATIONS	ACHIEVEMENTS
• AWS Academy Cloud Foundations — AWS Academy • Generative AI for Beginners — Great Learning Academy • Exploratory Data Analysis — Infosys Springboard • Python (Basic) — HackerRank	• Secured 6th Place in the Google Developer Challenge Hackathon, competing against teams from across the country. • Achieved 3rd Place in the Cognizant TechnoVerse Hackathon for developing an innovative technology solution.
